

# Lung Cancer Screening Learning Sessions

Primary care teams are valued and trusted by patients. Their recommendations are a leading reason why patients complete life-saving lung cancer screenings.

To support care teams' current screening processes, [iMPROve Health's](#) lung cancer screening learning sessions address current screening recommendations, how to identify and refer eligible patients to screening, and resources to promote commercial tobacco dependence treatment.

Let us support your care team's important role in cancer screening and prevention!

Care teams can choose from two session options: on-demand and live virtual webinar formats. Both on-demand and live virtual formats are one-hour sessions.

On-Demand Session	Live Virtual Session
Recorded session – <b><i>watch anytime!</i></b>	Webinar – <b><i>just for your practice, based on your availability!</i></b>
Features statewide data and resources	Features data and details specific to your practice
View the on-demand <a href="#">Lung Cancer Screening Learning Session</a> today!	Contact iMPROve Health to schedule a session, today!

## Learning Session Objectives

- Explain statewide prevalence of commercial tobacco use, lung cancer incidence and mortality, and the importance of early detection
- Describe lung cancer screening recommendations, eligibility criteria, benefits, risks, and costs
- Understand how to identify eligible patients and conduct counseling and shared decision-making visits
- Identify quality measures that will be impacted by referral processes for lung cancer screening
- Find strategies and resources for promoting lung cancer screening and commercial tobacco cessation
